```
Question.1. What will be the output of the following code snippet?
```

```
def func(a, b):
return b if a == 0 else func(b % a, a)
print(func(30, 75))
a) 10
b) 20
                                         Answer = 15
c) 15
d) 0
Q.2.) numbers = (4, 7, 19, 2, 89, 45, 72, 22)
sorted_numbers = sorted(numbers)
even = lambda a: a % 2 == 0
even_numbers = filter(even, sorted_numbers)
print(type(even_numbers))
a) Int
b) Filter
c) List
                                         Answer = Filter
d) Tuple
Q.3) As what datatype are the *args stored, when passed into
a) Tuple
b) List
                                          Answer = Tuple
c) Dictionary
d) none
Q.4) set1 = \{14, 3, 55\}
```

Q.8) Which of the following functions converts date to corresponding time in Python?

a) strptime	
b) strftime	
c) both a) and b)	Answer = A) Strptime
d) None	
Q.9) The python tuple is in nature.	
a) mutable	
b)immutable	
c)unchangeable	
d) none	Answer = B) Immutable
Q.10) The is a built-in function that returns integer numbers, which we can iterate using a	
. A. range()	
B. set()	
C. dictionary{}	
D. None of the mentioned above	Answer = A) Range
Question 11). Amongst which of the following name?	is a function which does not have any
A. Del function	
B. Show function	
C. Lambda function	
D. None of the mentioned above	Answer = C) Lambda Function
Question 12). The module Pickle is used to	
A. Serializing Python object structure	
B. De-serializing Python object structure	
C. Both A and B	

D. None of the mentioned above

"Defiant": "Sisko", }

Enterprise Picard,

Voyager Janeway

Answer = C) A and B

Question 13). Amongst which of the following objects for writing data in a binary file?	ng is / are the method of convert Python
A. set() method	
B. dump() method	Answer = B) dump() method
C. load() method	
D. None of the mentioned above	
Q.14). Amongst which of the following is / as binary file?	re the method used to unpickling data from a
A. load()	
B. set() method	
C. dump() method	
D. None of the mentioned above	Answer = A) laod()
Q.15). A text file contains only textual inform	nation consisting of
A. Alphabets	
B. Numbers	
C. Special symbols	
D. All of the mentioned above	Answer = D) All of the mentioned above
Q.16). Which Python code could replace the (Select all that apply.)	ellipsis () below to get the following output?
captains = {	
"Enterprise": "Picard",	
"Voyager": "Janeway",	

```
Defiant Sisko
a) for ship, captain in captains.items():
print(ship, captain)
) for ship in captains:
print(ship, captains[ship])
c) for ship in captains:
                                                     Answer = -----
print(ship, captains)
d) both a and b
Q.17). Which of the following lines of code will create an empty dictionary named
captains?
a) captains = {dict}
b) type(captains)
                                                Answer = D) captions = {}
c) captains.dict()
d) captains = {}
Q.18). Now you have your empty dictionary named captains. It's time to add some data!
Specifically, you want to add the key-value pairs "Enterprise": "Picard", "Voyager":
"Janeway", and "Defiant": "Sisko".
Which of the following code snippets will successfully add these key-value pairs to the
existing captains dictionary?
a) captains{"Enterprise" = "Picard"}
captains{"Voyager" = "Janeway"}
captains{"Defiant" = "Sisko"}
b) captains["Enterprise"] = "Picard"
captains["Voyager"] = "Janeway"
captains["Defiant"] = "Sisko"
c) captains = { "Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
```

```
} d) None of the above
```

```
Q.19). You're really building out the Federation Starfleet now! Here's what you have:
captains = {
"Enterprise": "Picard",
"Voyager": "Janeway",
"Defiant": "Sisko",
"Discovery": "unknown",
Now, say you want to display the ship and captain names contained in the dictionary, but
you also want to provide some additional context. How could you do it?
   a) for item in captains.items():
   print(f"The [ship] is captained by [captain].")
       b) for ship, captain in captains.items():
       print(f"The {ship} is captained by {captain}.")
       c) for captain, ship in captains.items():
       print(f"The {ship} is captained by {captain}.")
       d) All are correct
       Q.20) . You've created a dictionary, added data, checked for the existence of keys,
       and iterated over it with a for loop. Now you're ready to delete a key from this
       dictionary:
       captains = {
       "Enterprise": "Picard",
       "Voyager": "Janeway",
       "Defiant": "Sisko",
       "Discovery": "unknown",
       What statement will remove the entry for the key "Discovery"?
       a) del captains
       b) captains.remove()
       c) del captains["Discovery"]
       d) captains["Discovery"].pop()
                                                       Answer =C) del captains
       ["Discovery"]
```
